CTD data – Microsoft™ Office Excel limitation

The raw data files for CTD casts were converted using SeaBird Data Processing software to the Microsoft™ Office Excel .xls format.

The version of Excel released in Microsoft™ Office 2007 will open the files correctly and display all rows.

Older versions of Excel will not display more than 65536 rows. If the last row in an Excel file is record number 65536, it is recommended that a more recent version of Excel be installed.
